**Project Descriptions**

**Culbertson and Malta Female Latrines:** This project will add women's showering and latrine facilities to these National Guard Armories that were constructed with minimal, if any, facilities for the female soldiers. This project adds showers and upgrades latrines to these armories which have female troops assigned to the units.

**Fort Harrison Helicopter Dip Site:** This project will provide a point where helicopter crews can rapidly fill and refill their fire fighting buckets on Fort Harrison. This dip site will be large enough to accommodate 324 gallon water buckets used by Hueys to 2000 gallon buckets used by Chinooks.

**Statewide Vault Modifications:** This project will modify existing weapons vaults in armories statewide that do not meet present National Guard Bureau – Army Regulations. These modifications will include the installation of ¼” plate steel to the interior walls, ceilings and floors the existing vaults. Vault doors will also be replaced, as required.

**Billings Water Recycler:** This project will remove the inefficient existing washwater evaporator for the washbays at the Billings AFRC and replace with a closed loop water recycler. Natural gas usage at the facility will be reduced by approximately 342 dekatherms per year, resulting in a cost savings of \$3,762. The net present value of the gas savings over a 20 year time span is \$51,614.

**Ft. Harrison-Building 412 Mechanical:** This project will include furring out existing CMU walls to install insulation and sheetrock. Insulation will also be added in the attic. A gas furnace will be installed to maintain a working temperature.

**Fort Harrison Museum:** The expansion of the Montana Military Museum will include a new structure located between and connected to two existing buildings. The expansion will create approximately 3,500 square feet of museum space and more than double the existing display area. The Montana Museum Board is actively seeking donations from private and public sectors and construction will begin after sufficient funds are received.

**Fort Harrison IED Training Facility:** This project will provide a training area for National Guard troops to counter Improvised Explosive Device threats. The facility will include multiple engagement sites that will provide troops the necessary training to identify and defeat IED terrorization
